

# multilingual fonts

The chart below includes fonts we often recommend for our clients based on language and application.

“Source font” refers to the font used in the source document. In many cases, the source font will have all the necessary characters and does not need to be changed. For those languages in which a source font typically does not include all the required characters, alternate recommended fonts are listed.

Language	Native Language Name	Code	Microsoft (Word, Excel, PPT)	Adobe Creative Suite

Yiddish	יִיִדִישׁ	yi	Arial	Noto Sans Hebrew

\* The source font can be used if it supports all the characters. However, Arial is the best choice for this language.

\*\* In some cases, the source font will not have all the characters and a similar font must be used.
